  WHERE a.parent = b.parent AND a.child < b.child;
```

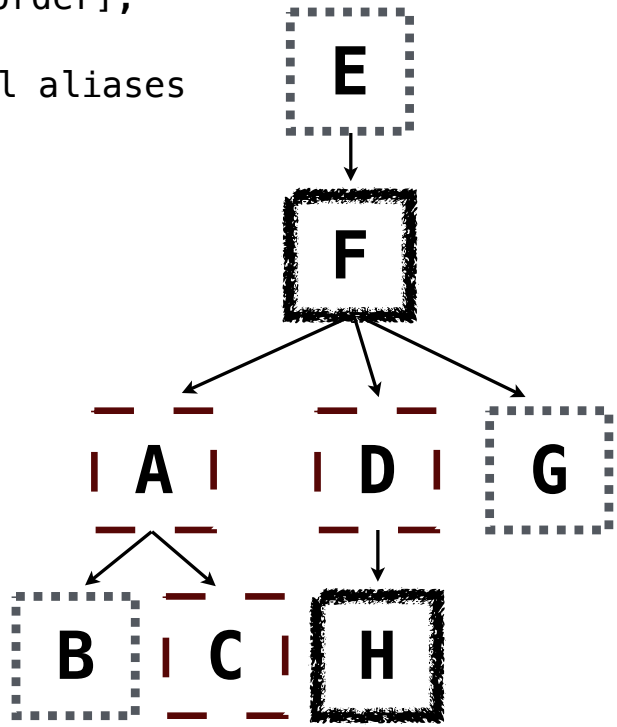
first	second
barack	clinton
abraham	delano
abraham	grover
delano	grover



Example: Grandparents

Which select statement evaluates to all grandparent, grandchild pairs?

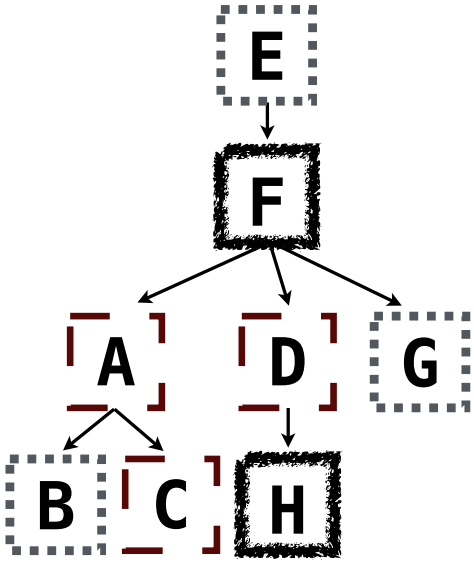
1
```
SELECT a.grandparent, b.child FROM parents AS a, parents AS b
                              WHERE b.parent = a.child;
```

2
```
SELECT a.parent, b.child FROM parents AS a, parents AS b
                         WHERE a.parent = b.child;
```

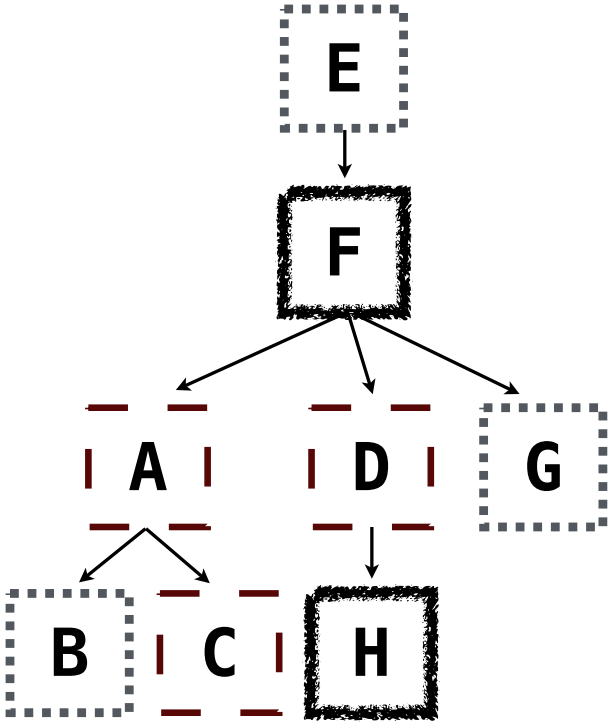
3
```
SELECT a.parent, b.child FROM parents AS a, parents AS b
                         WHERE b.parent = a.child;
```

4
```
SELECT a.grandparent, b.child FROM parents AS a, parents AS b
                              WHERE a.parent = b.child;
```

5 None of the above

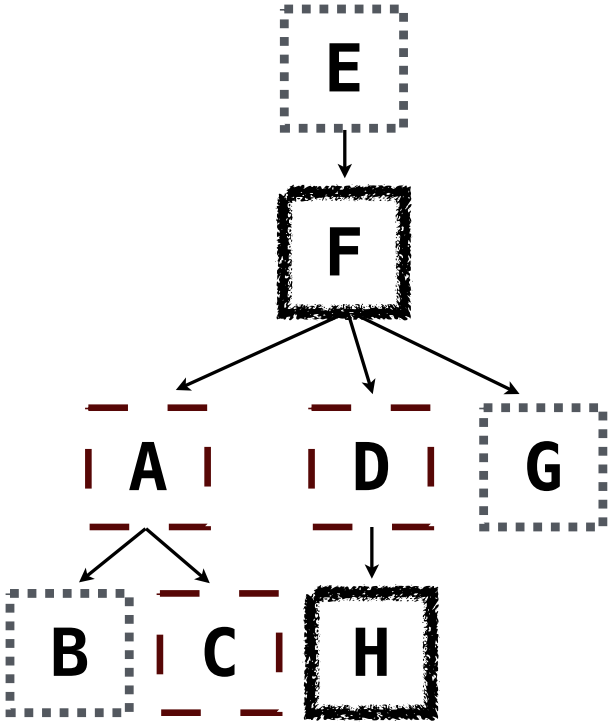


Joining Multiple Tables



Joining Multiple Tables

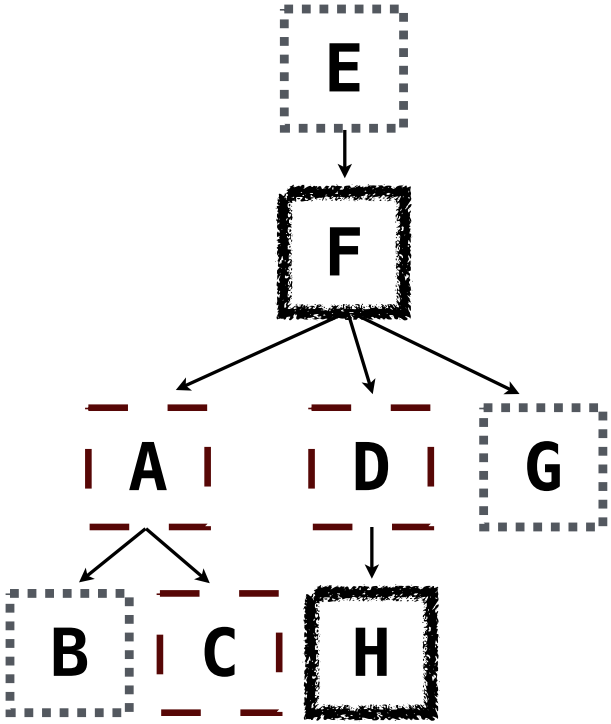
Multiple tables can be joined to yield all combinations of rows from each



Joining Multiple Tables

Multiple tables can be joined to yield all combinations of rows from each

```
CREATE TABLE grandparents AS
  SELECT a.parent AS grandog, b.child AS granpup
    FROM parents AS a, parents AS b
    WHERE b.parent = a.child;
```

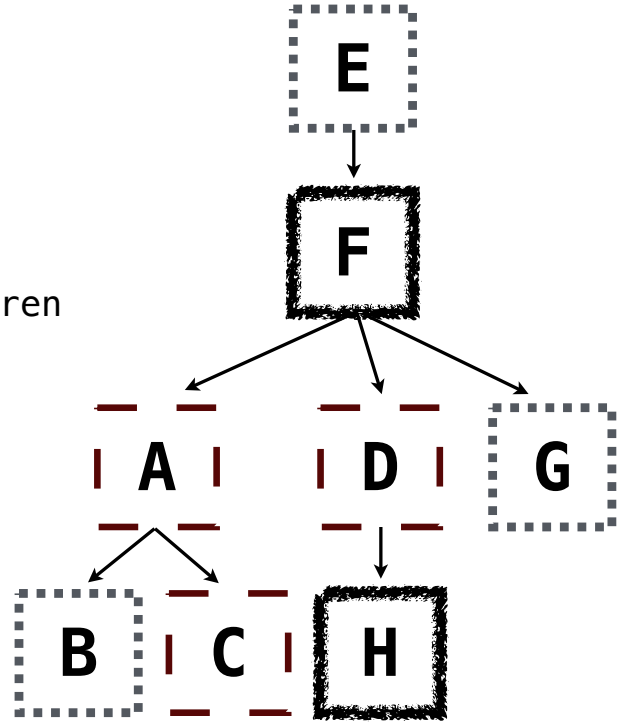


Joining Multiple Tables

Multiple tables can be joined to yield all combinations of rows from each

```
CREATE TABLE grandparents AS
  SELECT a.parent AS grandog, b.child AS granpup
    FROM parents AS a, parents AS b
    WHERE b.parent = a.child;
```

Select all grandparents with the same fur as their grandchildren



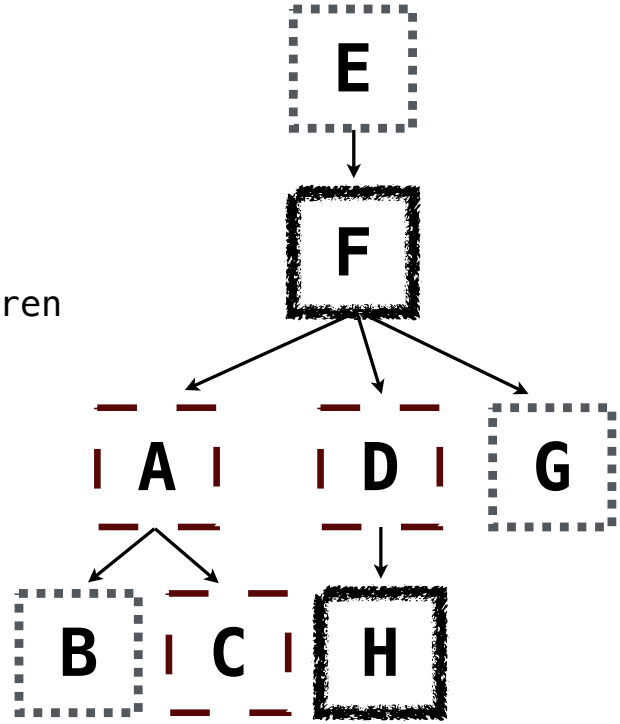
Joining Multiple Tables

Multiple tables can be joined to yield all combinations of rows from each

```
CREATE TABLE grandparents AS
  SELECT a.parent AS grandog, b.child AS granpup
    FROM parents AS a, parents AS b
    WHERE b.parent = a.child;
```

Select all grandparents with the same fur as their grandchildren

Which tables need to be joined together?



Joining Multiple Tables

Multiple tables can be joined to yield all combinations of rows from each

```
CREATE TABLE grandparents AS
